PROFILE

CDAC graduate and 2025 Electronics and Telecommunication Engineering graduate seeking an entry-level Software Developer position. Strong foundation in Java, C++, C, Python, Object-Oriented Programming, Data Structures, and problem solving. Hands-on experience developing software projects using Java, Spring Boot, MySQL, Python, and React. Quick learner with an interest in software development and building reliable applications.

EDUCATION

MET Institute of Information Technology, Nashik – C-DAC	Feb 2026 - Aug 2026
PGCPAC (Post Graduate Certificate Programme in Advanced Computing) Percentage : 62%	
Gokhale Education Society's R. H. Sapat College of Engineering, Nashik	2021 - 2025
Bachelor of Engineering – Electronics & Telecommunication Engineering CGPA: 7.9	
Karmaveer Shantarambapu Kondaji Wavare Arts, Science & Commerce College, Nashik	2021
HSC (12th) Percentage : 81.3%	
Rachana Vidyalaya, Nashik	2019
SSC (10th) Percentage : 80.80%	

TECHNICAL SKILLS

Programming Languages : C, C++, C#, Java, Python (Basic)
Web Technologies : HTML, CSS, JavaScript, React
Backend Technologies : Java, Spring Boot, REST APIs, JDBC
Database : MySQL, SQL
Core Concepts : Object-Oriented Programming (OOP), Data Structures, Algorithms, Exception Handling, Problem Solving

PROJECTS

AI-Based Point of Sale (POS) System	Jun 2026 – Aug 2026
Technologies used : Java, Spring Boot, React, MySQL, Python	
Developed an AI-based Point of Sale (POS) system to simplify and manage product management, billing, inventory, and sales operations. The system was developed using a full-stack approach, with React used to build the frontend, Java and Spring Boot used for backend development, MySQL used to store and manage application data, and Python used for AI-related functionality. The frontend communicates with the backend through REST APIs, allowing data to be created, retrieved, updated, and managed efficiently.	
Real-Time Traffic Management System Using ESP32	Aug 2024 - Jun 2025
Technologies used : ESP32, Arduino, C/C++, IR Sensors, Servo Motors	
Developed a real-time traffic management system using ESP32 and Arduino to monitor and control traffic based on vehicle density. The system uses IR sensors to detect vehicles on different lanes and processes the sensor data to control traffic signals accordingly. Integrated traffic light modules, servo motors, and relay modules for automated traffic management, along with an emergency vehicle priority feature to provide faster passage when required. Worked on sensor interfacing, microcontroller programming, hardware integration, and system testing.	

CERTIFICATIONS

- Full Stack Development Course** | Aug 2025 – Feb 2026 — MERN stack development training.
- Data Structures & Algorithms Module** — Certified in core DSA and problem-solving.
- C++ Module** — Certified in C++ programming and OOP concepts.
- Generative AI & Intelligent Application Development** — Completed a 3-day AI workshop.

ADDITIONAL INFORMATION

- Languages :** English, Hindi, Marathi
- Career Interest:** Software Development, Full-Stack Development
- Availability:** Open to relocation and immediate joining
